Beschreibung

My proposal is to create a A.I. based experience, that brings people to open fields, such as concert places or similar, where people can enter a capsule for 2-3 people, with enough distancing, where they can smell, feel see and hear the place they want to travel to.

The capsules (glass or any other similar material), are colored and painted outside with images of different tourist places like NY, beaches, Adventure sports, etc. and in the inside, a big round screen where the customer can choose where to go. That way, and like the 4D movies technology, with physical effects so they use every sense for a real experience.

The movie in 4D technology consists of an interactive experience where they can choose the place, get close or away to anything in the tour like touching monkeys or take a flyboard all the way over the sea. Going wherever they want (3d technol.) whether they choose a zoo or a beach or a city.

The competitive advantage are the price (less than a 3D virtual reality game) and the travel options (not as a 4d movie), since the customer can choose from the flight or going-to experience to the places to visit and also the places to spend the nights, so they can really feel they are having a vacation. Also there will be holograms of people attending them, interacting with the visitors or just walking by their side. All for more sensoriality.

So let's go on vacation!! Let's travel to Costa Rica!!

Mögliche Partner

Artificial intelligence team
Financial organizations
Drons companies
Tour operators
Cabins designers and builders

Hi Stuart! Thank you for your great idea. We do have a few questions on that idea: do you know how to technically solve this idea? Do you have a concept how this would work and how it would look? Or do you have specific ideas or contacts which could help us implement your idea? Thank you for your help. Greetings, the LEAD Team

That sounds very good and I can imagine that this will be an experience that is like a real vacation.

There will be no limits and the best is that theres no waiting for a bus, a train or a plane,you will be right there without any stress.
